Re-configuring Thunderbird for Windows - POP

1. Start Thunderbird
2. From the Tools Menu select Account Settings
3. Change Server Name, add @iwu.edu to your User Name, Make Security Settings match the information below -

4. Click on Outgoing Server (SMTP) on the left, then select the current account and server in the center box and click on Edit -
5. Enter the new SMTP Server Name and type in 465 for the port. Adjust Connection Security, Authentication Method and User Name as shown below (use your User Name – Not Tommy Titan’s) and Click Ok to close the window, then

6. Finish by clicking OK to close the configuration Window and you are done!
