

Hello! I am Khumoyun Abdulpattoev (he/him). I have always been interested in computers and technology in general, so the most logical decision was to major in Computer Science major. I am a Course Embedded Tutor for Computer Science I (CS127).

My tutoring appointments typically look like the following:

- We will work on different ways of getting the right result – there are always different ways of solving any problem, some are more efficient while others not as much. It is essential to learn multiple ways of solving a problem, and I am here to help you with that.
- I believe good knowledge of basics is necessary for a successful career. Thus, we will work on not just your mistakes, but also on your understanding of how everything works together.
- “One must learn by doing the thing, for though you think you know it you have no certainty, until you try.” -Sophocles
I strongly value learning by trying. Therefore, I encourage you to try and write everything you learn. Understanding a concept is the first step while putting your understanding into practice is the most important one. I will help you to make it a habit.

I have been tutoring for more than two years and have enjoyed every bit of it. Helping others to succeed is the best thing ever for me. My goal for the coming semester is to help as many students as possible to overcome their fears and finally start learning how to program and understand their mistakes. My office hours are on Tuesdays from 8:30 a.m. to 9:30 a.m. and 4 p.m. to 5 p.m. in E210 (CNS) and at 4 p.m. to 5 p.m. on Discord on Saturdays. Feel free to reach out with any questions related to my field. I will be more than glad to help.
