

Hello! My name is Maggie Stucko (she/her/hers) and I'm a current sophomore and biology major. I am a course embedded tutor for general biology, BIO102. I have a strong passion for biology as well as helping others so tutoring gives me a meaningful opportunity to combine two of my passions as well as help my peers to succeed!

A typical tutoring appointment with me might look something like this:

- Writing out ideas and drawing pictures of concepts together on whiteboards coupled with out loud explanations of them to deeply understand them
- Going through practice problems together
- Answering any clarifying questions you may have about class content or class assignments
- Working on some other class skills such as how to take good notes in biology and specific study practices to succeed in this class

My goal as a course embedded tutor is to help you reach proficiency on several different biological concepts through being someone to bounce ideas off of and push you in the right direction ultimately through all of the knowledge you currently have and all the resources you have access to! I want to also assist you in the overall success of general biology! I recognize that general biology is challenging and consists of a lot of overwhelming information but my goal is to help you sort through all of the concepts and become comfortable with them to make biology something interesting and less overwhelming for you!

For general biology, professors I have worked with include Alvey, Bolivar, Haywood, Schwend and Walker.

I will be available every Wednesday at 3:00-5:30pm, located in room 201 at Ames library or by zoom, as well as by specific appointment if you are unable to attend that time! Feel free to reach out to me through email, [mstucko@iwu.edu](mailto:mstucko@iwu.edu)! I'm super excited to work with you! :)
